LIST SUBMISSION GUIDELINES

OFFICIAL TOURNAMENT SOFTWARE

The World Team Championship will be using the official Warhammer App as well as Best Coast Pairings (BCP) to manage tournament administration.

Players unfamiliar with BCP should check out their website first to get familiar with how the BCP Player App operates. Look for an article named "Getting-Started-with-the-Player-App". Every player should have the latest version and downloaded the BCP Player App on their smartphone prior to the event.

Alternatively, players can administrate their BCP experience through the BCP website where they prefer.

REGISTERING FOR THE EVENT

Players will be automatically registered to the event by an event tournament organizer. In some cases, the email listed in the ticket purchase will not match the one from the player's BCP account, or the player will not have setup a BCP account yet. If you see your name missing on the event registree list then use the email address listed on the BCP event page to notify us as soon as possible. It's the player's responsability to make sure they get registered prior to list submission deadline!

SUBMITTING YOUR LIST TO BCP

Players will make sure they have updated the official Warhammer App prior to making and exporting a list to make sure all latest changes and updates are captured and our referees can adjudicate every list on the same reference basis as well as avoiding any syncing problems between players at the event that may arise from using different app versions.

Players should turn off auto-updates on the app immediately after list submission deadline.

Note that no third party applications may be used by players to export their lists. Players that do so may be subject to penalties.

When exporting your list, this must be done in the English language. No other language will be accepted. It is not necessary to include a header like has been tradition at the WTC in the past. Make sure your list is stating the app version used when exporting and posting your list to BCP. Once your list is in, set your faction and also your disposition in BCP. For the Warmaster GT, don't forget to set your nationality as Team Name to avoid getting paired into a countrymen Round 1 of the Warmaster GT.

LIST SUBMISSION GUIDELINES

LIST CHECKING FOR WARMASTER GT

Once all lists are submitted, we will make a google document where players need to check two lists from opponents using the same faction for errors/oversights (this includes not mentioning the right faction or disposition on BCP or using an outdated version of the app for list exporting) within the stated deadline. If you are the only player from a given faction, our referees will do a crosscheck. Any errors/oversights will need to be corrected, and penalties may apply, at the discretion of our referees. Where problems with lists are spotted, updating a list will always be done with the fewest possible changes to make it legal. Our referees will oversee this process with the players in question.

LIST CHECKING FOR WTC

Teams will check the lists from teams within their pod for any errors/oversights. This process will be overseen by our referees and penalties may apply.

LIST AND MODEL ISSUES ON SITE

The WTC prides itself on being a fun, competitive but most importantly fair tournament for all of its participants. As such, a kind reminder that WYSIWYG is mandatory at our event.

Ultimately it is always the player's responsibility to ensure that you have an accurate and legal army list, with the correct models to represent that list in accordance with all our policies and guidelines regarding third-party or 3-D printed models, conversions, bases, WYSIWYG, etc. Models that at the discretion of our referees, do not adhere to our policies and guidelines, will be pulled from the table for the duration of the event.

Where a player identifies an issue with their opponents army or list, this should be flagged immediately to any member of the referee team who will then take the appropriate action based on our policies and guidelines.
